GLPenFind — thirteen ways this could earn, and what each one costs you

Net of 20% VAT and Apple's 15% Small Business rate where a store sale is involved. Customer counts are the thresholds at which each idea pays, not forecasts. Green border means worth doing; dashed red means don't.

01 Quarterly report sold to the industry

Price by dose, spread, movers, ordering-friction trend — sold to clinics, wholesalers, researchers.

PROS
- Best value per hour — no new code
- Ten buyers is a viable business
- Journalists cite you free

CONS
- You must invoice and support
- Stale data kills it fast
- Maybe 30 UK buyers, total

£450 a copy · **10 = £4,500/yr** — DO THIS

02 Licence the live data as an API

£150/month per key for current prices and Ease scores, for clinics and comparison sites.

PROS
- Two clients = £3,600/yr
- Recurring, runs itself
- No extra crawling

CONS
- Keys, limits, docs, uptime
- Breaks when a site changes
- You become a support desk

£150/mo · **5 = £9,000/yr** — DO THIS

03 Pharmacies claim their profile

£25/month for logo, hours, delivery terms and a correction route — cosmetics only.

PROS
- 10 of 68 = £3,000/yr
- They fix our errors
- Direct supplier contact

CONS
- Looks like paid placement
- One angry pharmacy is a story
- Invoicing for small sums

£25/mo · **10 = £3,000/yr** — FIREWALL FIRST

04 Free app, £2.99 Pro unlock

Alerts, widget, reorder reminders, price history — things a web page cannot do.

PROS
- £2.12 net, no renewals
- Free download grows ranking
- Native work answers rule 4.2

CONS
- Native features must exist first
- Few pay for a price list
- Apple takes 15%

£2.99 · **1,400 = £2,968** — BEST APP MODEL

05 Web membership, £3/month

Alerts, history, watchlist, CSV export — billed by Stripe, no Apple cut.

PROS
- 100 members = £3,420/yr
- No 15% to Apple
- Recurring if it sticks

CONS
- Accounts, billing, support
- 300 members is a lot alone
- Must not unlock the app

£3/mo · **300 = £10,260/yr** — LATER

06 £0.99 paid app, up front

Pay before download, everything included.

PROS
- No billing code needed
- Filters tyre-kickers
- One decision, done

CONS
- £0.70 net — needs volume
- Most won't pay blind
- Fewer users, worse ranking
- Paid wrapper risks 4.2

5,000 = £3,506 · break-even 113 — WEAKEST

07 £1.99/year subscription

Annual fee for the app and its alerts.

PROS
- £1.41/yr each, repeating
- Reframes it as a service

CONS
- Churn on a £2 product is brutal
- "Why pay for public prices?"
- Contradicts anti-hassle pitch

56 subs covers Apple's fee — MEH

08 Reader donations

"This saved me £40 a month" plus a tip jar.

PROS
- Ten minutes to set up
- Signals independence
- 80 = £3,840/yr

CONS
- Unpredictable
- Needs an audience first
- Feels like asking

£4/mo · **80 = £3,840/yr** — EASY, LOW RISK

09 Licence an embedded price box

"Cheapest 15mg today — £220" for forums and clinic sites.

PROS
- £20-50/mo a site, pure margin
- Every embed advertises you
- Reaches people off-site

CONS
- Needs an endpoint and cache
- Easy to block or ignore
- Few willing hosts

£20-50/mo per site — LATER

10 Display advertising

Banner networks on the price list.

PROS
- Trivial to add
- Pays without selling

CONS
- ~£50/mo at this traffic
- Undoes the clean look
- Health ad networks = privacy risk

Pennies per thousand views — AVOID

11 Paid placement or a "featured" slot

A pharmacy buys the top of the list.

PROS
- Would earn the most, fastest

CONS
- Ends the whole premise
- Ease score becomes meaningless
- MHRA risk over POM inducements
- Unrecoverable

Never, at any price — NEVER

12 Sell access to the list

Put the index behind the app or a login.

PROS
- Forces a purchase from visitors

CONS
- Kills the search traffic
- Charges for what Monj gives free
- The advert loses its audience

Trades the asset for a receipt — NO

13 Affiliate links to pharmacies

Commission per referral — already excluded by the project's rules.

PROS
- Standard for comparison sites
- Costs the reader nothing

CONS
- Incentive to rank payers higher
- Readers cannot audit it
- Contradicts stated independence

Excluded by design — NO

If any pharmacy ever pays, these four rules go public first

1. Ranking is a pure function — scraped price and counted steps. No manual overrides, ever.
2. A public "who pays us" page, updated the day an invoice is raised.
3. Payment buys cosmetics only: logo, hours, a link — never position, price or Ease.
4. Nothing paid appears in the app's ranking either. One rule, both surfaces.

Thresholds are illustrative, not forecasts. Net figures assume 20% VAT and Apple's 15% Small Business rate.
